

The app design pack

VERSION 1

JULY 17, 2026

STATUS DOCTRINE LOCKED

CONFIDENTIAL · FOR PARTNERS

LOCKED DOCTRINE

Four rules the whole design hangs on

MTC LIVES IN OUR LEDGER

A row in our own database wearing a token's costume. Not crypto, no transfer verb, expires by clock.

THE CHAIN IS READ-ONLY

One bridge: "does this wallet hold at least 1 \$ACM?" Nothing is ever written on-chain by the app.

QR NOW, NFC LATER

Rotating one-time codes, generated on the phone with zero signal. Tap-to-redeem is Phase 2.

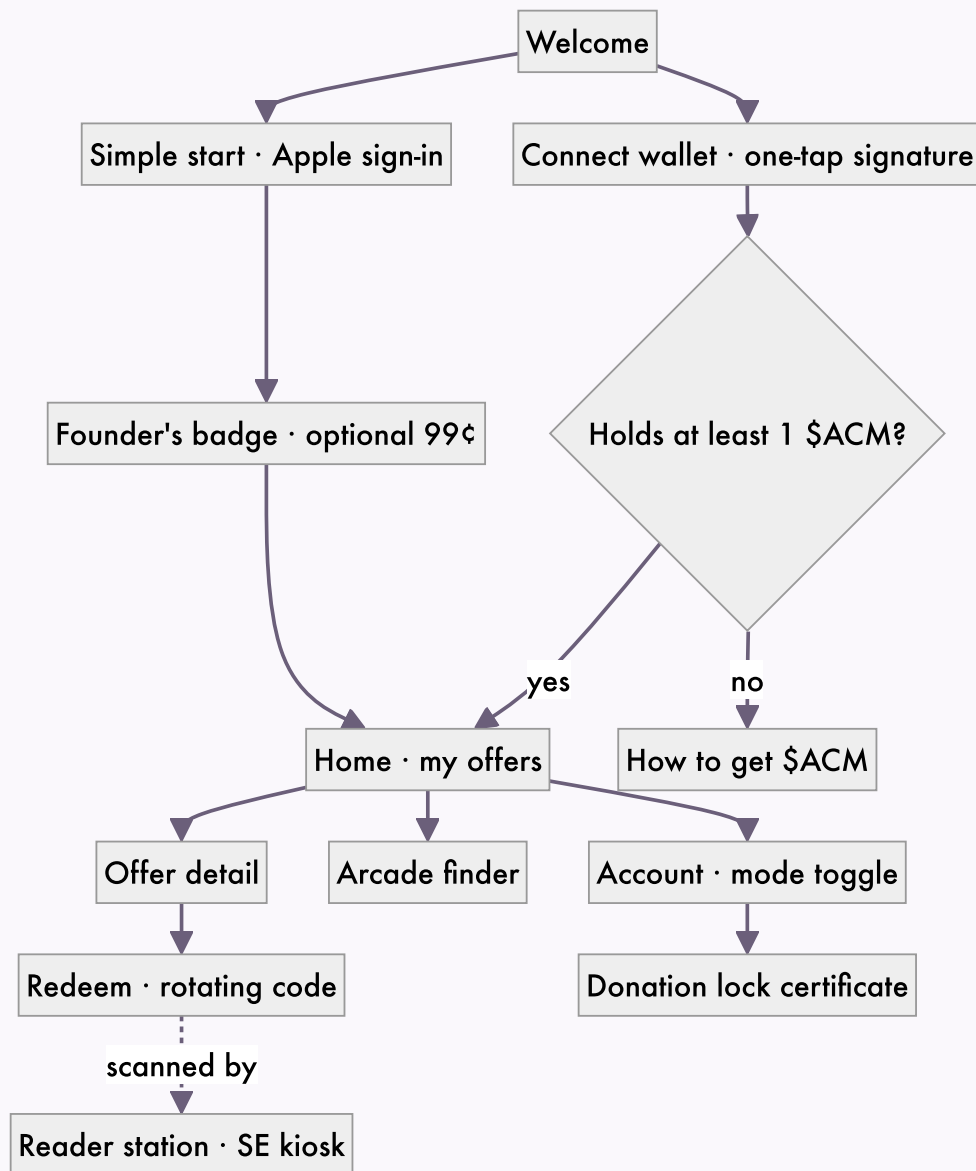

NETWORK IS OPTIONAL

Connectivity is an optimization, never a dependency. Readers store and forward; coupons work offline.

*A **Meme Token Credit (MTC)** is a non-transferable, time-limited promotional credit issued by the company and recorded on its private ledger. An MTC is not a cryptocurrency, not a blockchain token, and has no cash value. It exists only within the app and expires if unused.*

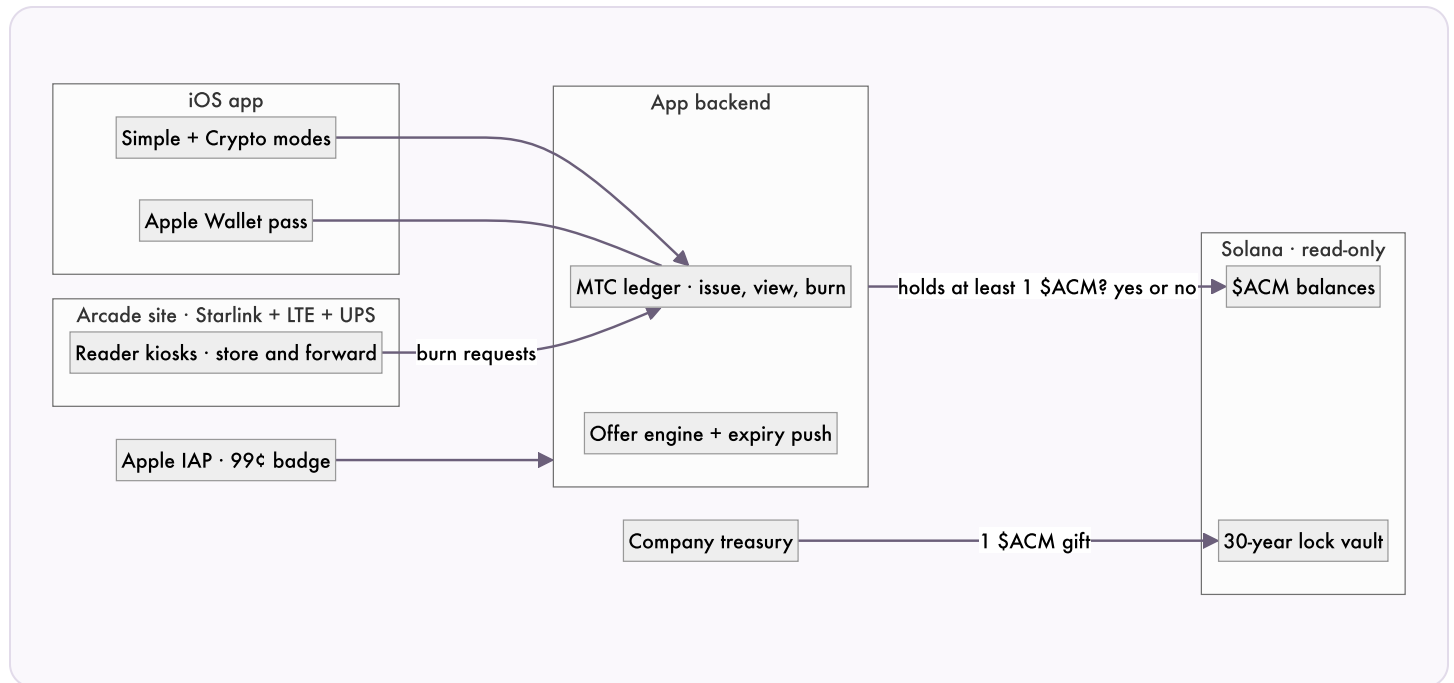

Screen map

Every screen in version 1 and the paths between them. Two doors in, one hub, three spokes. The reader station is a separate device running a separate app.

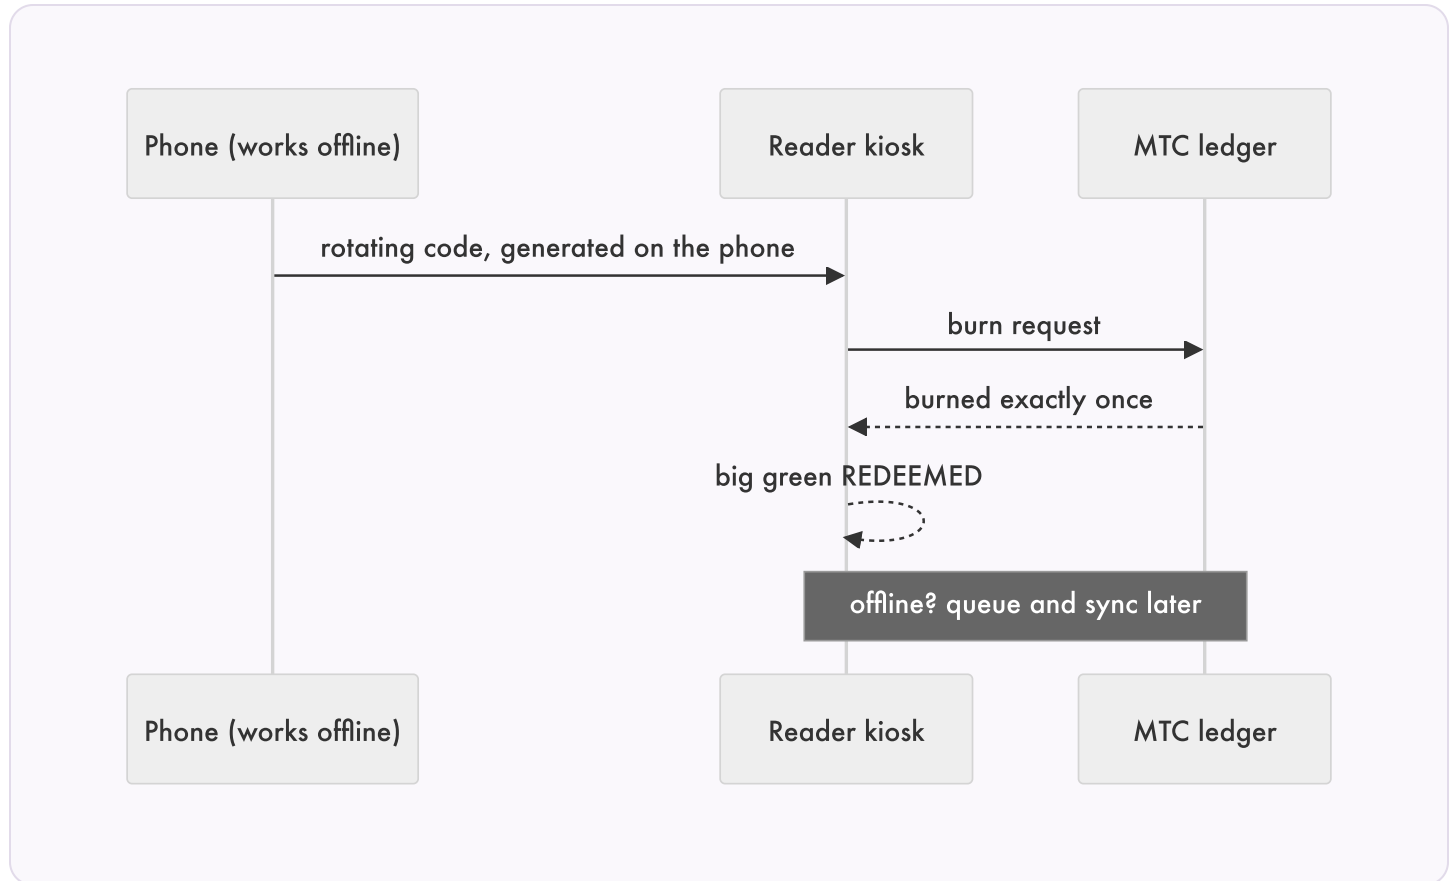

System architecture

Four boxes and one treasury. The only arrow touching Solana from the app side is a question; the only arrow writing to the lock vault is our own treasury making the 1 \$ACM gift after a 99¢ badge purchase.

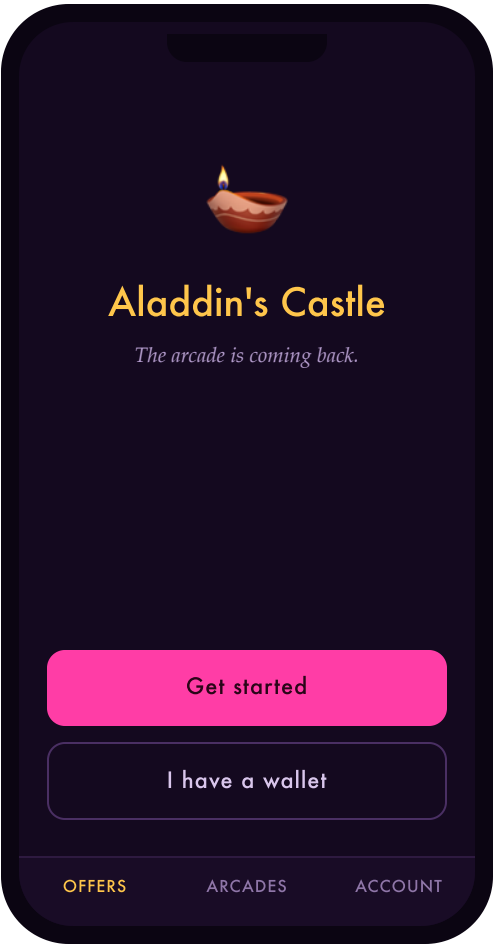

The redemption handshake

The moment at the counter, including the dead-zone case. The burn is one atomic write, so a code can never be spent twice.

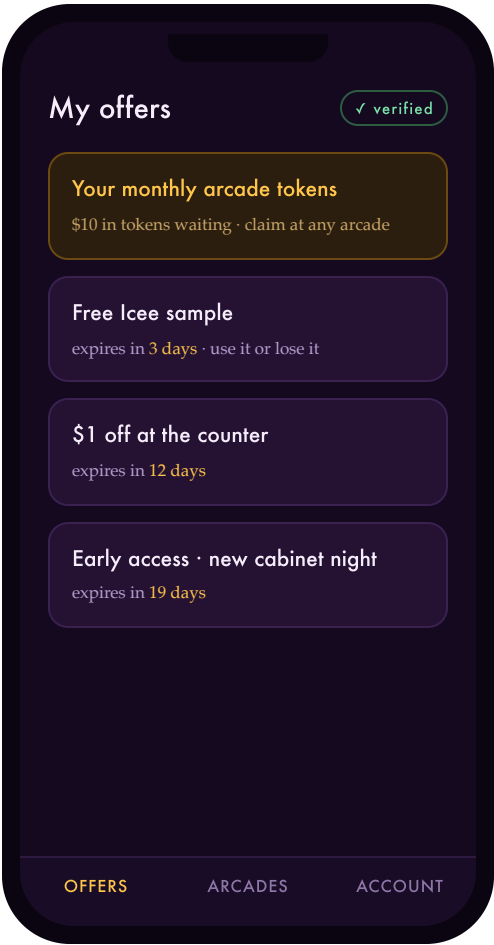

Wireframes · every screen

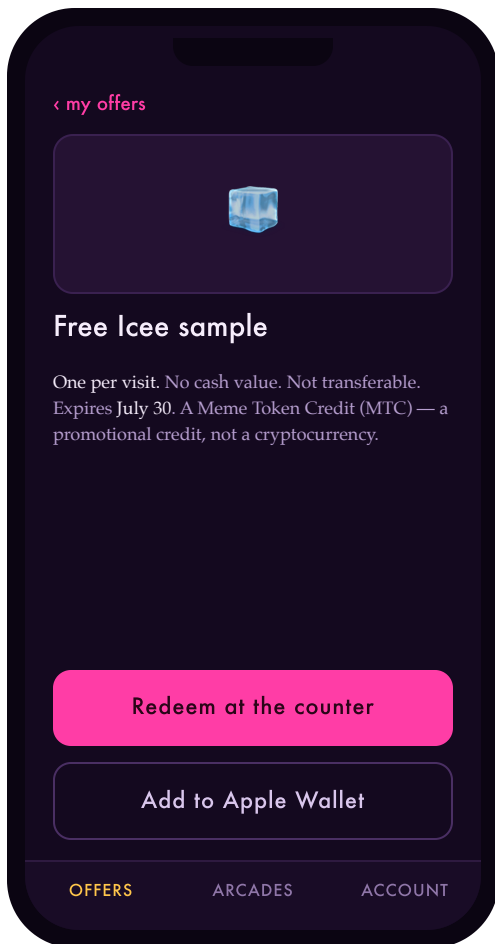

Simple mode never says the word "crypto." Crypto User mode adds the wallet, the \$ACM check, and the lock contract to the account screen. A live clickable version of these screens exists alongside this document.

HOME · SIMPLE MODE

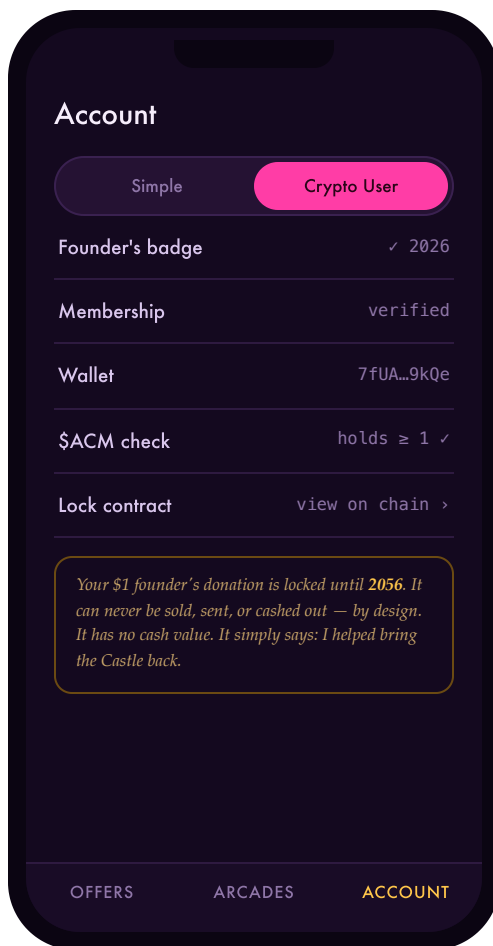

OFFER DETAIL

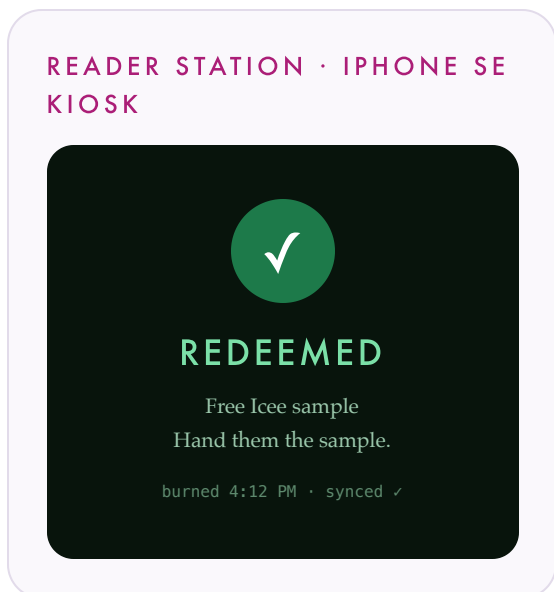

REDEEM · ROTATING CODE

ARCADE FINDER

ACCOUNT · CRYPTO USER MODE

WHAT THE CASHIER SEES

Green means go, one glance from three feet away. If the link is down the kiosk reads "queued · will sync" and the counter keeps moving.

What this pack feeds

1. **Style-guide spec** — type, color, and component sheet for the app.
2. **Copy deck** — every screen's words, Simple and Crypto variants side by side.
3. **Reader kiosk spec** — SE hardware list, Guided Access setup, offline queue behavior.
4. **Counsel packet** — the MTC definition, lock language, and 99¢ badge flow for securities review.
